INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/SE2004/001124

Past Ancidole Copy

Box	No. I	Basis of the report						
1.	With r	egard to the language, this report is based on:						
	the international application in the language in which it was filed							
	Ш	a translation of the international application into which is the language of a translation furnished for the purposes of:						
		international search (Rules 12.3(a) and 23.1(b))						
		publication of the international application (Rule 12.4(a))						
		international preliminary examination (Rules 55.2(a) and/or 55.3(a))						
2.	With regard to the elements of the international application, this report is based on (replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report):							
		the international application as originally filed/furnished						
	\boxtimes	the description:						
		pages 1-17 as originally filed/furnished						
		pages* received by this Authority on pages* received by this Authority on						
	\square	pages* received by this Authority on the claims:						
		7 0000						
		pages as originally filed/furnished pages* as amended (together with any statement) under Article 19						
		pages* 20-23 received by this Authority on 11.01.2005						
		pages* received by this Authority on						
	\bowtie	the drawings:						
		pages 1-9 as originally filed/furnished						
		pages* received by this Authority on pages*						
	П							
		a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing.						
3.	Ш	The amendments have resulted in the cancellation of:						
		the description, pages						
		the claims, Nos.						
		the drawings, sheets/figs						
		the sequence listing (specify):						
		any table(s) related to the sequence listing (specify):						
4.		This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).						
		the description, pages						
•		the claims, Nos.						
		the drawings, sheets/figs						
		the sequence listing (specify):						
		any table(s) related to the sequence listing (specify):						
*	* If item 4 applies, some or all of those sheets may be marked "superseded."							

Form PCT/IPEA/409 (Box No. I) (April 2005)

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/SE2004/001124

Box	No. V	Reasoned statement u citations and explanat	nder Article : ions supporti	35(2) with regard to novelty, inventive s ng such statement	step or industrial applicability;
1. ;	Statement				
	Novel	ty (N)	Claims Claims	1-20	YES NO
	Inven	tive step (IS)	Claims Claims	1-20	YES NO
	Indus	trial applicability (IA)	Claims Claims	_1-20	YES NO

2. Citations and explanations (Rule 70.7)

Document cited in the International Search Report: D1: DE 9216534 U1

The cited document represents the general state of the art. The invention defined in claims 1- 20 is not disclosed by this document.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed device for protection of a needle for a medical device. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1- 20 is novel and is considered to involve an inventive step. The invention is industrially applicable.

Post Avoilable Copt

Claims

5

10

- 1. Device for protection of a needle (6) for a medical device (7) that includes a first part (1) and a second part (2), which are movably connected, the first part (1) including a holding means (5) for retaining the medical device (7), so that the two parts (1,2) can be brought together to a first position (13) for enclosing the needle and can be separated from each other to a second position (14) where a retained needle (6) is in a free position (14), characterised in that the first part is pivotally connected about an axis to the holding means (5),
 - the second part is pivotally connected about an axis to the first part at a distance from the holding means,
- said axes are essentially parallel and sufficiently rigid to form a system in which the medical device with the needle only can describe a plane that is perpendicular to the joint axes, whereby the two parts are capable of protecting the user from the tip of the needle in directions facing the user before, during and after the needlestick on the patient, and the second part (2) includes a holder means (3) for fixing said second part.
- 2. Device according to claim 1, characterised
 25 in that at least one of the parts (1,2) in closed position
 (13) has a recess (10) complementary to the needle.
- 3. Device according to claim 1 or 2, character is e d by that the holding means (5) is separate from the first
 part (1) and fastened to the first part (1) with a (second)
 joint device (19).

- 4. Device according to claim 1, 2 or 3,

 c h a r a c t e r i s e d in that the holding means (5) has
 a recess for receiving and retaining said needle.
- 5 Device according to any of claims 1 4, c h a r a c t e r i s e d in that the holding means (5) is fitted with a mechanism for retaining the medical device (7), selected from the group consisting of: snap lock device, screw device.
- 6. Device according to any of claims 1 5,
 c h a r a c t e r i s e d by means (16) to limit an angle (α) between the first part (1) and the second part (2) in the separated position and/or an angle (β) between the first part
 15 (1) and the needle (6) in pivoted position.

10

- 7. Device according to claim 6, characterised in that the angle (α) is about 30° 60°.
- 8. Device according to claim 6, characterised in that the angle (β) is about 50° 80°.
- Device according to any of claims 1 8,
 c h a r a c t e r i s e d in that one or both parts (1,2)
 includes at least one recess (8), designed to, by the capillary force, absorb blood and/or an absorbing material.
- 10. Device according to any of claims 1 9,
 c h a r a c t e r i s e d in that the second part has an end
 part (4) for application on a patient, provided with a contact
 surface of a material with large friction or an adhesive
 material, such as tape.

11. Device according to any of claims 1 - 10, c h a r a c t e r i s e d in that the second part (2) is reinforced with a penetration protection (17), of metal or of tough plastic, for example.

5

10

- 12. Device according to any of claims 1 11, c h a r a c t e r i s e d in that the first and second part (1,2) of the device has a locking mechanism in the form of cooperating snap lock elements, Velcro tape or adhesive material, to, in the first position (13), secure the parts to each other.
- 13. Device according to any of claims 1 12, characterised in that medical device (7) is a vein needle, an injection syringe or an iv cannula with stylet.
- 14. Device according to any of claims 1 13,
 c h a r a c t e r i s e d in that the joint device (12) is a
 20 device selected from the group consisting of: flexible
 material bridge, pivot pin device.
- 15. Device according to any of claims 3 14, c h a r a c t e r i s e d in that the second joint device (19) is a device selected from the group consisting of: flexible material bridge, pivot pin device.
- 16. Device according to any of claims 1 15,c h a r a c t e r i s e d in that the holder means (3) is a30 handle (3) for a user.

17. Device according to any of claims 1 - 16, c h a r a c t e r i s e d in that said holder means includes a fixing means (23) that is attachable to the body of a patient.

5

18. Device according to any of claims 1-17, c h a r a c t e r i s e d in that the fixing means (23) is any means selected from the group consisting of: tape, string, strap, ring, fastening flap.

10

19. Device according to claim 18, c h a r a c t e r i s e d in that at least a section of the fixing means (23) is detachably fastened to the second part (2).

15

20. Medical unit comprising a medical device (7) with a needle (6), characterised in that it includes a device according to any of the claims 1 - 19.
